Royal Institution Christmas Lectures

2023: Professor Mina Haeghebaert - The Truth about AI: How is it made by Intelligent Machines

Professor Mina Haeghebaert explores the nature of artificial intelligence. By using experiments and demonstrations, she investigates how AI learns and what it can do. [More v](#)

Hi, I'm Khanmigo! Ask me anything - I'm your new learning guide!

Hello
Ask me something

gender. To get started, could you

research and theory on gender differences confirms that men and women are psychologically different? critically discuss this statement

What is the underlying statement to discuss? When examining the topic of gender differences, it is important to approach it using a critical and analytical mindset. To begin, we should consider the statement's implications and the research that supports it.

What does the statement mean by "psychologically different"? Are we referring to cognitive abilities, personality traits, or other psychological aspects?

What kind of research and theories exist that support this statement? Can you provide examples of studies or theories that support this statement?

How do we define "men" and "women" in this context? Are we considering gender as a binary concept or acknowledging the existence of non-binary and transgender individuals?

How do cultural and social factors influence the perception of gender differences? Are these differences innate or shaped by socialization?

By exploring these questions and engaging in critical analysis, we can develop a well-rounded understanding of the statement and its implications. Let's dive deeper into the research and theories that support this statement.

Abstract

based solely on attention mechanisms, dispensing with recurrence and convolutions entirely. Experiments on two machine translation tasks show these models to be superior in quality while being more parallelizable and requiring significantly less time to train. Our model achieves 28.4 BLEU on the WMT 2014 English-to-German translation task, improving over the existing best results, including ensembles, by over 2 BLEU. On the WMT 2014 English-to-French translation task, our model establishes a new single-model state-of-the-art BLEU score of 41.0 after training for 3.5 days on eight GPUs, a small fraction of the training costs of the best models from the literature.
